Holm)

Every study passes the same gates; parameters are chosen from ACC and capability only, never from the claiming measure.

v1: weak residual bridge

two-way vs one-way

null

-0.07 [-0.21, 0.07]

vs static direction

null

+0.18, unmatched

vs labeled text

+0.85

labels lower claiming

v2: stronger channels

D memory reading

+55.8

content-specific (lower bound +34)

C text labels

+26.6

unlabeled - labeled

E balanced rehearsal

+52.5

not a rehearsal artefact

B two-way vs one-way

no-go

redesigned as B'

v3: redesigns and controls

A' memory vs static, matched

+33.4

same decodability, only memory claims

B' merging under a loop

no-go

excess +0.07 < 0.10

link kept vs cut

+54.8

after the cut, current rule still +13.3

third-person record at $w = 2$

equivalent

-0.7 (bound -11.3); -3.2 at $w = 1$
